
P. Lauren Szathmary

Ecologist

LSzathmary@researchplanning.com

Research Planning, Inc.

Ms. Szathmary is an ecologist specializing in marine ecology and conservation, natural resource mapping, human impacts on natural systems, and ecological effects of climate change. She also has expertise in data acquisition, management, and analysis. Ms. Szathmary's responsibilities at RPI include serving as a biologist and data manager on several different types of projects and tasks. In her time at RPI, she has worked on seven Environmental Sensitivity Index mapping projects and numerous natural resource data syntheses in support of Resources at Risk Analyses. She also serves as a member of the National Oceanic and Atmospheric Administration (NOAA) Scientific Support Team as a responder to oil/hazardous materials spills, and she worked with the NOAA Restoration Center on long-term restoration planning and Natural Resource Damage Assessment for the Deepwater Horizon oil spill. Over the course of her career, she has worked in the field and/or in stakeholder meetings at dozens of locations along the east, west, and Gulf coasts of North America, throughout the Caribbean, and in Australia and New Zealand.

Prior to joining RPI, Ms. Szathmary was a staff researcher at the University of South Carolina, the University of Otago (New Zealand), and Brown University. Ms. Szathmary's graduate and post-graduate research focused on effects of climate change and other human impacts in coastal ecosystems, and she has authored and co-authored several technical publications based on her work in these areas.

EDUCATION

Fulbright Fellow, University of Otago, Dunedin, New Zealand (2009)

Project: Shifts in sea urchin diet and urchin population grazing impacts on kelp along an environmental gradient

M.S., Biological Sciences, University of South Carolina, Columbia, SC (2006)

Thesis Title: Predicting direct and indirect effects of climate change on a predator-prey pair in the rocky intertidal ecosystem

B.S., Marine Science, University of South Carolina, Columbia, SC (2004)

Study abroad semester, James Cook University, Townsville, Australia

Magna Cum Laude and With Honors from the South Carolina Honors College

Honors Thesis: Constructing a heat budget model of *Pisaster ochraceus*

AWARDS, GRANTS, AND FELLOWSHIPS

Brown University Environmental Change Initiative Quick Start Grant (2012)

Fulbright Graduate Student Fellowship for research and study in New Zealand (2009)

Bamfield Marine Sciences Centre Graduate Research Scholarship (2004)

Phi Beta Kappa membership (2004)

Traci Heincelman Memorial Scholarship, Marine Science Program, University of South Carolina (2004)

College of Science and Mathematics Scholarship, University of South Carolina (2003, 2004)

Outstanding Undergraduate in Marine Science Award, University of South Carolina (2002, 2003)

Howard Hughes Undergraduate Research Fellowship (2002)

National Science Foundation Research Experiences for Undergraduates Internship (2002)

University Scholars Scholarship, University of South Carolina (2000 – 2004)

South Carolina LIFE Scholarship (2000 – 2004)

PROFESSIONAL EXPERIENCE

2012 to Present: Ecologist, Research Planning, Inc., Columbia, SC

2010 to 2012: Graduate Researcher, Brown University, Providence, RI

2009: Fulbright Fellow and Visiting Researcher, University of Otago, Dunedin, New Zealand

2006 to 2008: Research Specialist, University of South Carolina, Columbia, SC

Ms. Szathmary's experience is outlined separately in five main areas:

- 1) Coastal Resource Mapping
- 2) Oil and Hazardous Material Spill Response
- 3) Natural Resource Restoration
- 4) Ecological Modeling
- 5) Experimental Ecology

COASTAL RESOURCE MAPPING

Environmental Sensitivity Index (ESI) Mapping: Ms. Szathmary has served as a biologist on the following ESI Projects used for coastal zone management, contingency planning, and hazardous material/natural disaster responses:

South Florida	2013
Texas, Upper Coast	2013
Louisiana	2013
Delaware Bay	2013
Oregon/Washington	2014
Chesapeake Bay	2015
Southwest Florida	2016

Her role as a biologist on multiple ESI projects requires extensive correspondence with biological and socio-economic resource experts from several government, university, and private agencies throughout the U.S. She has extensive experience in natural resources data collection, interpretation, and compilation using both quantitative data sources and participatory mapping techniques.

OIL AND HAZARDOUS MATERIALS SPILL RESPONSE

Ms. Szathmary is part of the Scientific Support Team to the U.S. Coast Guard provided by the National Oceanic and Atmospheric Administration (NOAA) for oil and chemical spills. She has written numerous resources at risk analyses for oil and chemical spill events and drills.

NATURAL RESOURCE RESTORATION

Ms. Szathmary was part of the NOAA Restoration Center Deepwater Horizon Restoration Planning Team. She worked with federal, state, NGO, and academic scientists to develop long-term restoration plans to restore natural resources damaged by the Deepwater Horizon oil spill. She was a member of the mesophotic and deep benthic ecosystems sub-team, and her work with this group included organizing and leading sub-group meetings with all partners, researching restoration alternatives, synthesizing available data to scale restoration alternatives, and developing a database of Marine Protected Area (MPA) effectiveness primary literature and data to be used for a broad-scale meta-analysis. She also contributed

to writing the Programmatic Damage Assessment and Restoration Plan (PDARP) and the Programmatic Environmental Impact Statement (PEIS) for the final settlement with BP.

ECOLOGICAL MODELING

From 2004 – 2008, Ms. Szathmary worked as a researcher with a group at the University of South Carolina that used ecological modeling techniques to investigate the effects of climate change on rocky intertidal ecosystems. She developed and used computer models of animal body temperatures to understand how climate change affects organism physiology and species interactions. This project required the use of several U.S. government historical climate datasets and forecasts, computer modeling skills, and field validation of models. She also expanded the use of these models worldwide and managed a network of collaborators from 50 sites in 8 countries.

EXPERIMENTAL ECOLOGY

Salt marsh resilience mechanisms after regional die-off: From 2010 – 2012, Ms. Szathmary worked as part of a group at Brown University that investigated salt marsh resilience and recovery from human-caused salt marsh die-off. Using field experiments, she tested hypotheses related to effects of predator depletion, consumer population dynamics, and plant facilitation to understand the specific mechanisms of salt marsh resilience in the face of a range of human impacts.

Effects of climate change on salt marsh habitats: From 2010 – 2012, Ms. Szathmary designed, managed, and executed an integrative research project to examine the effects of climate change in U.S. east coast salt marsh ecosystems. She devised and executed a large-scale field experiment to test the effects of elevated air temperature and/or drought on vegetation in multiple salt marsh habitats in southern U.S. salt marshes. Ms. Szathmary also used field experiments to investigate the potential for recovery of salt marsh habitats in New England following an extreme climate event.

RELEVANT SKILLS AND CERTIFICATIONS

Software – R, ArcGIS 10, Microsoft Office Suite, EndNote

Hardware – Experience using RTK GPS networks and equipment

Certifications – PADI Divemaster with Nitrox and dry suit certifications, 24 hour HAZWOPER, Basic CPR/first aid, PADI Emergency Oxygen Provider, Canadian Red Cross Boating Safety Program Pleasure Craft Operator
